OWEN KIM

Vancouver, BC | owen.sykim@gmail.com | linkedin.com/in/owensykim | legowen.github.io/legowen

Summary

IT professional with four years across Microsoft 365, identity, endpoint management, and network security, supporting offices in North America, Europe, and Asia at Tier 3 level with Tier 4 vendor escalation. Led a Google Workspace to Microsoft 365 migration, responded to a tenant security incident with Microsoft support, and set the access control and data security rules for company AI tools. Works day to day in Entra ID and Active Directory, Jamf and Intune, Palo Alto firewalls and VPN, Dataverse and Power BI reporting, and writes PowerShell automation to cut out manual work.

Key Skills

Identity and Access: Microsoft Entra ID (Azure AD), Active Directory, Entra Connect, Global Administrator and privileged role management, Privileged Identity Management (PIM), role-based access control (RBAC), least-privilege and service account design, Conditional Access, Multi-Factor Authentication, Single Sign-On, Group Policy, Windows LAPS, Bitwarden

Endpoint Management (MDM): Jamf Pro, Microsoft Intune, Apple Business Manager, Automated Device Enrollment, VPP, PPPC profiles, macOS, Windows 11, Android Enterprise

Security: Data security and access control, network security, Bitdefender GravityZone, Microsoft Defender, DMARC, SPF, DKIM, incident response, access reviews, AI usage governance, disaster recovery (DR), business continuity (BCP)

Networking: Palo Alto NGFW, GlobalProtect VPN, Juniper, UniFi, VLAN, DNS and DHCP, Cloudflare DNS, TCP/IP

Microsoft 365 and Google Workspace: Exchange Online, SharePoint Online, OneDrive, Teams, tenant and cross-platform migration, license management, Google Workspace administration and Shared Drives

Business Applications and Data: Dataverse, Power BI, Microsoft Fabric, Dynamics 365 Business Central (ERP), Dynamics 365 Sales (CRM), Power Automate, Power Apps, Copilot Studio, MySQL, business analysis and reporting

Automation and DevOps: PowerShell, Azure Automation Runbooks, Azure DevOps pipelines, Python (pandas), Bash, Google Apps Script, Power Automate workflows, Docker, Kubernetes (AKS), GitLab, Harbor, MLflow

Servers, Cloud and Infrastructure: Windows Server, Linux, domain controller operations, Microsoft Azure, AWS (S3, Glacier, IAM), VMware, Hyper-V, Synology NAS, Grafana, Prometheus

Support and Vendor Management: Tier 3 support and Tier 4 vendor escalation, Jira Service Management, Confluence, AssetTiger asset management, vendor and license management, IT documentation and SOPs, onboarding and offboarding, BambooHR

Experience

Sprung Studios | Vancouver, BC

IT Engineering Specialist | March 2026 – September 2026

Game UX research and playtesting studio with offices in Vancouver and Brighton, UK. Clients include EA, Krafton, Wizards of the Coast, and Mojang.

- Owned Tier 3 and Tier 4 escalation for both studios and led the Tier 1 and Tier 2 support function, setting the triage path and response standards, and driving vendor cases with Microsoft, Jamf, Apple, and hardware partners to resolution.
- Led the migration from Google Workspace to Microsoft 365 across both studios, covering Exchange Online, SharePoint architecture, OneDrive, and Teams, and consolidated Jira and Confluence into a single governed platform.
- Designed and ran hybrid identity across both studios on Entra Connect with on-premises Active Directory as the source of truth, covering domain controller health, Group Policy management, Conditional Access design, and PowerShell-driven server administration and automation.
- Managed the Mac and Windows endpoint fleet on Jamf Pro and Intune, building the enrollment pipeline through Apple Business Manager and PreStage, and standardizing configuration profiles, application delivery, and device lifecycle.
- Built out the Microsoft platform for the studios: SharePoint architecture and Teams governance, a Power Apps and SharePoint List service desk replacing Jira Service Management, Power Automate workflows for recurring IT processes, and Copilot Studio agents governed by access control and data handling rules that kept NDA-covered client material out of them.
- Established the endpoint security baseline across the fleet on Bitdefender GravityZone and Microsoft Defender — policy scheme, exclusion standards, and compliance reporting — mapped controls to client security requirements, and automated recurring checks and reporting with PowerShell.
- Managed the Palo Alto next-generation firewall estate: maintained the security policy rule base and zone design, tuned App-ID and threat prevention profiles, administered GlobalProtect VPN authenticated against on-premises Active Directory, and ran every change through log review and commit control, aligning policy to the requirements of EA and Microsoft studio clients.
- Rebuilt the studio server room and core infrastructure to a documented business standard: Hyper-V hosts and virtual machines, Synology NAS storage and backup, and the UniFi network controller, moving every service and SaaS platform onto documented service accounts with credentials held in Bitwarden.
- Ran the studio AWS footprint for backup and archive — S3 and Glacier with IAM access control and retention aligned to client contracts — and worked in Azure DevOps to keep build and development environments consistent with client-side pipelines.
- Restructured IT governance and spend: consolidated overlapping tools, reclaimed unused and duplicate licenses, renegotiated renewals, and rebuilt the documentation and roadmap so the environment could be run and audited to a standard.
- Ran recurring account and access reviews for studio clients including EA, covering contractor audits and contract-required data destruction.

Sunia Technology Inc. (rebranded as FluxInk) | Burnaby, BC

IT Infrastructure Engineer | March 2025 – March 2026

AI company building OCR and Handwriting recognition hardware and software, with offices in Vancouver, Seattle, Taipei, Kuala Lumpur, Singapore, Hong Kong, Shenzhen, Xiamen, and Suqian.

- Handled Tier 3 escalations for all nine offices and ran Tier 4 vendor cases with clients including Lenovo to resolution, working in English, Korean, and Chinese.
- Built and maintained the company's Microsoft data and reporting stack on Dataverse, Power BI, and Microsoft Fabric, and used it for business analysis across project and infrastructure planning.
- Ran the SharePoint and OneDrive tenant domain rename with Microsoft Support during the rebrand from Sunia to FluxInk.
- Deployed a Conditional Access policy requiring Entra ID joined devices for Azure DevOps, and resolved enrollment issues across regions involving Mac Platform SSO, Windows MDM scope, and device join states.
- Configured and maintained Palo Alto firewall policy, VPN access, and access control protecting internal systems and company data across all regions.
- Operated and maintained Azure Kubernetes Service clusters running production AI workloads — scaling, upgrades, and troubleshooting — and kept the GPU training servers and their Docker, GitLab, Harbor, and MLflow tooling running for the AI team.
- Ran Grafana and Prometheus monitoring with capacity and availability alerting, and administered VMware and Hyper-V hosts including resource allocation and virtual machine migrations.
- Administered Azure DevOps across regions — build and release pipelines, repository and permission structure — with a PowerShell runbook in Azure Automation that warns owners before their access tokens expire.
- Deployed Dynamics 365 Business Central and Sales with outside consultants, introduced Jira as the project and workflow system, and wrote the internal IT documentation in English and Chinese.
- Designed and maintained the company's SharePoint intranet sites and Microsoft 365 ecosystem, centralizing document management and team collaboration.
- Oversaw server room infrastructure, ensuring reliable network connectivity, data integrity, and system uptime.
- Supported AI annotation and data pipeline tasks, bridging IT operations and machine learning workflows.

Renu Bio Health Ltd. | Burnaby, BC

IT Specialist | August 2023 – February 2025

Joined as a full-stack developer building internal web services in PHP, JavaScript, and Java, then moved into IT to run infrastructure, cloud services, and business system integration.

- Built and maintained B2B and B2C e-commerce platforms on Shopify, Amazon, AWS, and GoDaddy, and connected them to internal systems.

- Administered Microsoft 365, Azure, SharePoint, Power Automate, Power BI, and Power Apps, and built automated workflows for order handling and reporting.
- Managed on-site and remote networks including LAN and WAN, routers, switches, and firewalls, and handled TCP/IP and DNS troubleshooting.
- Managed Microsoft Azure, SharePoint, Power Automate, Power BI, and Power Apps, implementing automated workflows and enhancing collaboration.
- Ran NAS storage for user access, data protection, and backup continuity.
- Provided technical support, IT documentation, and cross-departmental training, improving overall system reliability and operational efficiency
- Supported business operations by integrating multiple e-commerce platforms with internal systems.

Code Ninjas | Burnaby, BC

Coding Instructor | June 2023 – December 2023

- Taught students programming logic, problem solving, and debugging.
- Helped update curriculum and tracked student progress using Excel and internal platforms.
- Recognized for building strong mentor-student relationships and promoting interest in STEM and technology education.

Audi Canada | North Vancouver, BC

Technician | December 2020 – July 2023

- Performed diagnostic programming and system setup for new electric vehicles using Audi proprietary scan tools and software management systems.
- Utilized Audi Service App to monitor, calibrate, and control electronic and electrical components during vehicle maintenance and repair processes.
- Took on IT support for the shop, including network and connectivity troubleshooting, application tickets, and coordination with Audi's technical service portal.

Daesung Energy Co., Ltd. | Daegu, Korea

IT Intern | January 2016 – August 2016

- Built interactive user interface components in JavaScript, HTML5, and CSS3 for internal web applications.
- Supported system configuration and internal web application testing.

Education

Dankook University | Seoul, Korea | Bachelor of Science, Computer Science and Psychology

British Columbia Institute of Technology | Burnaby, BC | Diploma, Automotive Technology
